Library

Karlshochschule Library

What if a library knew no spatial boundaries and thus turned an entire university into a treasure trove of knowledge? The centrally located library forms the heart of the university, but reading and working areas are spread across the entire campus and are open to all students and visitors. This means you are always surrounded by knowledge and have opportunities to retreat anywhere on campus, allowing you to dream and read about foreign cultures and new knowledge landscapes.

General information

Filter search query

Truncate (wildcard search)

If you do not know the exact spelling of a search term or if you want to search for several word forms using a character string, you can truncate the search term by abbreviating the character string with a question mark.

The system will then search for all search terms that contain at least the entered character string and, if necessary, any number of additional characters instead of the question mark. Truncation is not permitted in the Year search field.

Search fields

All fields

The All fields search corresponds to the search in a “Basic Index” of the target catalog. Depending on the target catalog, such a basic index includes only a few or all search aspects of the catalog. The system searches for references that contain all search terms (AND link), in whatever combination.

Title

In the “Title” search field, you can search for one or more words from the title of the publication. Multiple title words are automatically linked with AND. Wildcard search with “?”.

Author

In the “Author” search field, you can search for an author, editor or other person who has made a significant contribution to a publication. For a complete search, the first name should also be entered.

Corporation

In the search field “Corporation” you can search for societies, associations, institutes, universities, congresses, universities, companies, states, municipalities, authorities, etc. In many associations, searches are limited! If you get “zero” hits, you should repeat your query in the “Title” search field.

Year

In the search field “Year” you can search for the year of publication of a publication.

ISBN

In the “ISBN” search field, you can search for the International Standard Book Number of a publication. The ISBN originally consisted of 10 digits, since 2007 of 13 digits.

ISSN

In the “ISSN” search field, you can search for the International Standard Serial Number of a publication. Newspapers, journals, publication series etc. are usually provided with an ISSN. The ISSN consists of 8 digits.

Publisher

In the search field “Publisher” you can search for the publisher of a publication.
